Tourism is back, but unevenly

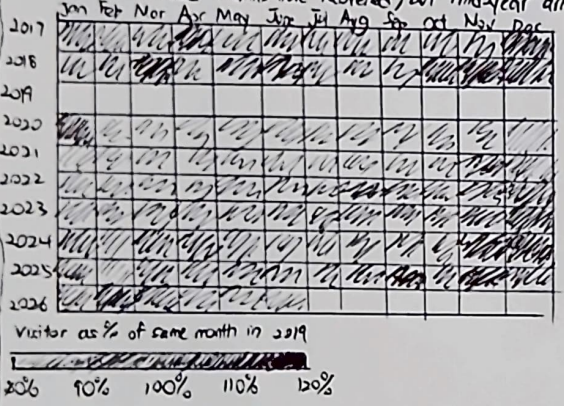

Australian tourism has recovered on paper. Underneath, the picture is more uneven

1. Have visitors actually returned?

1.1 Jobs are well above 2019, but visitors are not

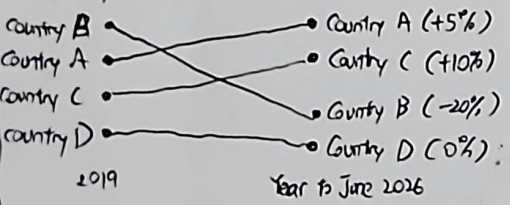

1.2 Peak and shoulder months have recovered, but mid-year arrivals lag

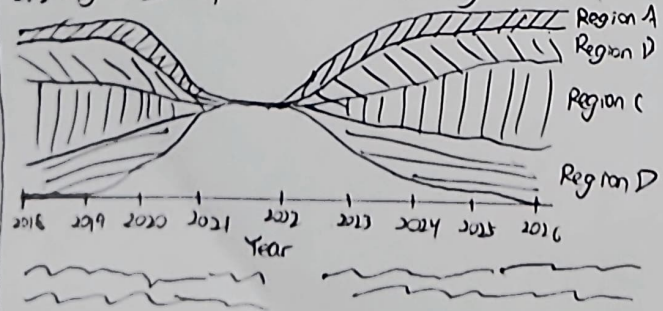

2. Who is coming now, who is not?

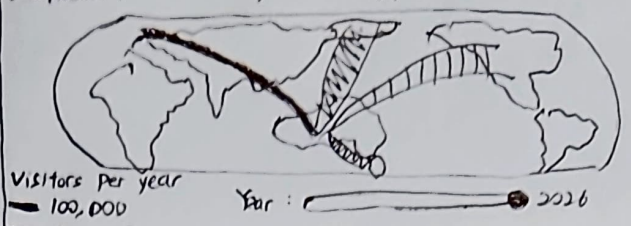

2.1 Country A now leads in visitors

2.2 Region B explains most of the missing visitors

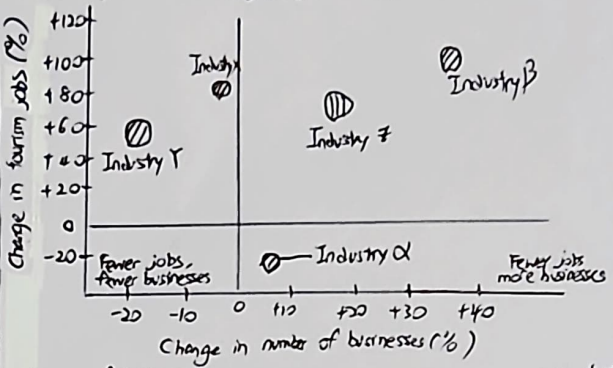

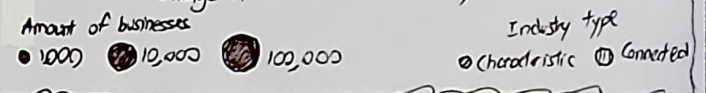

2.3 Australia's visitor map has been redrawn

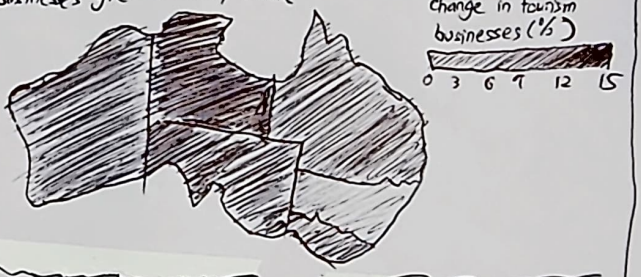

3. Who is benefiting from the recovery?

3.1 Industry X has more jobs, but fewer businesses

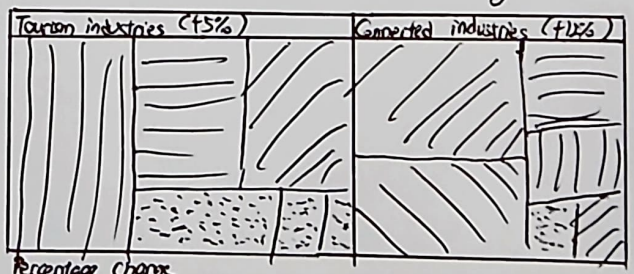

3.2 Businesses grew in every state

3.3 Tourism has fewer small businesses and more larger ones

So is tourism back?
